Application/Control Number: 09/688,134

Art Unit: 2143

Claims 1-12 are examined.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shimizu (US Patent No. 5,987,230) and further in view of Yokomizo et al. (US Patent No. 6,321,266).

- 1. As per claim 1, Shimizu teach a network data terminal for printing information obtained from a network comprising:
- -a printer that is connectable to or incorporated into the data terminal, and is capable of printing on opposite sides of a recording sheet; (two-side printing control, col 1, lines 62-63)
- -a memory device for storing ad data received from the network; (storing output data based on the intermediate data generated by the generation means, col 3, lines 32-33)
- -a device for allowing a user of the data terminal to choose whether to print the ad data on the same side of a recording sheet as the information or on the opposite side from the information; (corresponds to two-side printing control, col 1, lines 62-63)
- -a print control device that produces print image data for one side or for both sides from the information and the ad data in accordance with which side of the recording sheet the ad data is to print, and controls the printer in accordance with the print image data; (consequently the user can utilize the information processing

Application/Control Number: 09/688,134 Page 3

Art Unit: 2143

apparatus with default setting matching the loaded memory size, and can also control the memory size for printing by the setting from the operation panel or by the job controlling language, col 16, lines 64-67)

Shimizu does not explicitly teach a charge modification data sending device for sending data for modifying charge for provision of the information in accordance with amount of ad data printed with the information. However, Yokomizo et al. teach a Centronics I/F controller which performs an I/F control for connecting a printer with a modified Centronics type I/F. (col 17, lines 19-20)

Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention was made to incorporate Yokomizo et al. to Shimizu to the efficiency of utilization of the memory can be improved and the optimum memory configuration can be realized.

2. As per claim 2, Shimizu teach a network data terminal:

-a device for allowing the user to designate categories of the ad data to print with the information; (the designation of the memory configuration can be selected according to the environment of utilization by the user. col 18, lines 6-11)

-a sorting device for sorting out those ad data relating to the designated categories, for use in producing the print image data. (the mask objects are sorted and formed into a link list as shown in FIG. 19. Col 13, lines 46-47)

3. As per claim 3, Shimizu teach a network data terminal ,further comprising a device for allowing the user to select the amount of ad data to print with the information, wherein the charge is modified in accordance with the selected printing amount of ad data.

Shimizu does not explicitly teach a charge modification data sending device for sending data for modifying charge for provision of the information in accordance with amount of ad data printed with the information. However, Yokomizo et al. teach a Centronics I/F controller which performs an I/F control for connecting a printer with a modified Centronics type I/F. (col 17, lines 19-20)

Application/Control Number: 09/688,134

Art Unit: 2143

Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention was made to incorporate Yokomizo et al. to Shimizu to the efficiency of utilization of the memory can be improved and the optimum memory configuration can be realized.

4. As per claim 4, Shimizu teach a network data terminal for printing information obtained from a network comprising:

-a printer that is connectable to or incorporated into the data terminal, and is capable of printing on opposite sides of a recording sheet; two-side printing control, col 1, lines 62-63)

-a memory device for storing ad data received from the network; (storing output data based on the intermediate data generated by the generation means, col 3, lines 32-33)

-a sorting device for detecting a category of the information to print, and automatically sorting out those ad data relating to the category of the information; (corresponds to the mask objects are sorted and formed into a link list as shown in FIG. 19. Col 13, lines 46-47)

-a print control device that produces print image data from the information and the ad data sorted by the sorting device, and controls the printer in accordance with the print image data; and (the mask objects are sorted and formed into a link list as shown in FIG. 19. Col 13, lines 46-47)

Shimizu does not explicitly teach a charge modification data sending device for sending data for modifying charge for provision of the information in accordance with amount of ad data printed with the information. However, Yokomizo et al. teach a Centronics I/F controller which performs an I/F control for connecting a printer with a modified Centronics type I/F. (col 17, lines 19-20)

Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention was made to incorporate Yokomizo et al. to Shimizu to the efficiency of utilization of the memory can be improved and the optimum memory configuration can be realized.

Application/Control Number: 09/688,134 Page 5

Art Unit: 2143

5. As per claim 5, Shimizu teach a network data terminal further comprising
-a device for allowing a user of the data terminal to choose whether to print the
ad data on the same side of a recording sheet as the information or on the opposite side
from the information, wherein the print control device produces print image data for one
side or for both sides in accordance with which side of the recording sheet the ad data
is to print. (corresponds to two-side printing control, col 1, lines 62-63)

6. As per claim 6, a network data terminal further comprising a device for allowing a user of the data terminal to select the amount of ad data to print with the information, wherein the charge is modified in accordance with the selected printing amount of ad data.

Shimizu does not explicitly teach a charge modification data sending device for sending data for modifying charge for provision of the information in accordance with amount of ad data printed with the information. However, Yokomizo et al. teach a Centronics I/F controller which performs an I/F control for connecting a printer with a modified Centronics type I/F. (col 17, lines 19-20)

Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention was made to incorporate Yokomizo et al. to Shimizu to the efficiency of utilization of the memory can be improved and the optimum memory configuration can be realized.

7. As per claim 7, Shimizu teach a printing method for printing information obtained from a network by use of a printer that is connectable to or incorporated into a data terminal of the network, the method comprising the steps of:

-storing ad data received from the network; storing output data based on the intermediate data generated by the generation means, col 3, lines 32-33)

-detecting a category of the information to print;

-sorting out those ad data relating to the category of the information; (the mask objects are sorted and formed into a link list as shown in FIG. 19. Col 13, lines 46-47)

Application/Control Number: 09/688,134

Art Unit: 2143

-printing the sorted ad data along with the information; (corresponds to a printing job, col 7, line 25)

Shimizu does not explicitly teach a modifying charge for provision of the information in accordance with the amount of ad data printed with the information. However, Yokomizo et al. teach a Centronics I/F controller which performs an I/F control for connecting a printer with a modified Centronics type I/F. (col 17, lines 19-20)

Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention was made to incorporate Yokomizo et al. to Shimizu to the efficiency of utilization of the memory can be improved and the optimum memory configuration can be realized.

- 8. As per claim 8, Shimizu teach a printing method, wherein the information obtained from the network is printed on an obverse side of a recording sheet, whereas the ad data is printed on a reverse side of the recording sheet. (two-side printing control, col 1, lines 62-63)
- 9. As per claim 9, Shimizu teach a printing method, further comprising the step of designating the amount of ad data to print with the information. (the mask objects are sorted and formed into a link list as shown in FIG. 19. Col 13, lines 46-47)
- 10. As per claim 10, Shimizu teach a printing method for printing information obtained from a network by use of a printer that is connectable to or incorporated into a data terminal of the network, the method comprising the steps of:

-storing ad data received from the network; (storing output data based on the intermediate data generated by the generation means, col 3, lines 32-33)

-printing the information on an obverse side of a recording sheet, while printing the ad data on a reverse side of the recording sheet; and two-side printing control, col 1, lines 62-63)

Shimizu does not explicitly teach a modifying charge for provision of the information in accordance with the amount of ad data printed with the information. However, Yokomizo et al. teach a Centronics I/F controller which performs an I/F control for connecting a printer with a modified Centronics type I/F. (col 17, lines 19-20)

Art Unit: 2143

Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention was made to incorporate Yokomizo et al. to Shimizu to the efficiency of utilization of the memory can be improved and the optimum memory configuration can be realized.

- 11. As per claim 11, Shimizu teaches a printing method, further comprising the step of designating categories of the ad data to print with the information. (the designation of the memory configuration can be selected according to the environment of utilization by the user, col 18, lines 6-11)
- 12. As per claim 12, Shimizu teaches a printing method further comprising the step of designating the amount of ad data to print with the information. (the designation of the memory configuration can be selected according to the environment of utilization by the user, col 18, lines 6-11)

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mitra Kianersi whose telephone number is (703) 305-4650. The examiner can normally be reached on 7:00AM-4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wiley can be reached on (703) 308-5221. The fax phone number for the organization where this application or proceeding is assigned is (703) 746-9923.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.
